

Kushal KV

Bengaluru, Karnataka

+91-8123367656 — kushalkv2004@gmail.com — Portfolio — GitHub — LinkedIn

Education

BMS College of Engineering

Bachelor of Engineering in Computer Science (Data Science)

CGPA: 9.27

Bengaluru, Karnataka

Oct 2023 – Present

Technical Skills

Languages:	Python, Java, SQL, R, Kotlin
ML & Data:	Pandas, NumPy, scikit-learn, Matplotlib, TensorFlow, Feature Engineering, EDA
Backend:	FastAPI, Flask, REST APIs, Docker
Databases & Tools:	PostgreSQL, MongoDB, Firebase, Power BI, Git, Jupyter Notebook, Render, Vercel

Projects

Aadhaar N.E.X.U.S — National Digital Governance Intelligence System

Live — GitHub

Python, Pandas, Streamlit, Plotly

- Analyzed Aadhaar enrolment and update data across **36 States/UTs and 645+ districts**, processing large-scale monthly administrative records to benchmark national Digital Equity.
- Designed a composite **Digital Equity Index (DEI)** integrating Access Stress, Update Burden, and Stability Risk into a normalized 0–1 scoring framework for cross-state comparability.
- Identified high-risk districts with elevated update burden and volatility (**> 0.45 monthly variance**), enabling automated classification into Healthy, Access Stress, Update Burden, and Stability Risk categories.
- Deployed an interactive Streamlit dashboard with state-level drill-down, real-time KPI visualization, and exportable district reports for infrastructure prioritization simulation.

DetectAI — AI Content Detection Mobile Application

APK — GitHub

Kotlin, Flask, Hugging Face APIs, Docker, REST APIs

- Built an end-to-end Android application integrating a Flask backend with Hugging Face inference APIs for AI text and image detection.
- Orchestrated 3 transformer-based detectors (RoBERTa text model + 2 SDXL image models) using ensemble agreement and confidence aggregation logic.
- Tested on **100+ mixed AI-generated and human-written samples** to validate ensemble consistency and confidence calibration.
- Achieved **2–4 second end-to-end inference latency** per request through optimized REST communication, timeout handling, and structured JSON parsing.

ScamShield — Hybrid AI Job Scam Detection System

(Special Mention — GenAI Hackathon 2025)

GitHub

Python, Langflow, OpenRouter API, Web Scraping

- Developed a three-layer AI pipeline combining **50+ heuristic scam indicators**, live domain validation, and GPT-based contextual reasoning for real-time job scam detection.
- Implemented dynamic weighted scoring (30–30–40 baseline) with adaptive rebalancing under critical flags, achieving **95% classification accuracy** with **< 3s response time**.
- Reduced false positives to **< 5%** in internal validation by incorporating domain trust checks, salary sanity filters, and inter-model variance-based confidence estimation.
- Classified postings into SAFE, SUSPICIOUS, and SCAM categories with transparent score breakdown and risk explanation for user interpretability.

Leadership & Extracurricular

President, DSync Club — BMSCE

Sept 2025 – Present

- Leading the Data Science club, organizing technical workshops and peer-learning sessions.
- Coordinating event planning and execution to promote applied ML and analytics culture.

Department Coordinator, PhaseShift — College Technical Fest

Dec 2023 & Sept 2025

- Led end-to-end fest operations including planning, budgeting, and sponsorship coordination.

Club Coordinator, UTSAV — College Cultural Fest

May 2025

- Led event planning, sponsorship outreach, and execution strategy for club participation.
